

# EcoHotel

## Solutie de automatizare KNX\*

Rafael Marculescu  
Septembrie 2010

\* KNX = standard intrenational de automatizari cladiri

**Schneider**  
 **Electric**

# Hotel Cautis 4\*, Azuga

- Hotelul se afla in Azuga (Valea Prahovei) in apropierea partiei Sorica.
- Pentru a se asigura un consum optim s-a ales o solutie de automatizare pe standard KNX

# De ce automatizari ? Avantaje!

- Flexibilitate
  - Siguranta
  - Confort
  - Economie
  - 4 Clase de eficiență energetică a clădirilor (A,B,C,D) – funcționalitățile ce trebuie indeplinite în clădiri rezidențiale și terciare (conform EN15232)
- 
- The diagram illustrates the four energy efficiency classes for building automation systems (BACS) and Thermal Building Management (TBM) systems. It consists of four horizontal arrows pointing to the right, each containing a class label and a description. The classes are ordered from highest efficiency (A) to lowest efficiency (D).
  - A:** High energy performance BACS and TBM
  - B:** Advanced BACS and some specific TBM functions
  - C:** Standard BACS
  - D:** Non energy efficient BACS

# Cerinte automatizari per clase de performanta energetica a cladirilor

prEN 15232:2007 (E)

Table 1 — Function list and assignment to energy performance classes

Definition of classes							
Residential				Non residential			
D	C	B	A	D	C	B	A
<b>AUTOMATIC CONTROL</b>							
<b>HEATING AND COOLING CONTROL</b>							
Emission control							
<i>The control system is installed at the emitter or room level, for case 1 one system can control several rooms</i>							
0	No automatic control						
1	Central automatic control						
2	Individual room automatic control by thermostatic valves or electronic controller						
3	Individual room control with communication between controllers						

# Cerinte automatizari per clase de performanta energetica a cladirilor - cont

VENTILATION AND AIR CONDITIONING CONTROL							
Air flow control at the room level							
0	No control						
1	Manual control						
2	Time control						
3	Presence control						
4	Demand control						

HOME AND BUILDING AUTOMATION SYSTEM							
0 No home & building automation functions							
1	Centralized adapting of the home & building automation system to users needs: e.g. time schedule, set points...						
2	Centralized optimizing of the home and building automation system: e.g. tuning controllers, set points...						

# Efficienta energetica in hotel

- S-a dorit ca acest hotel sa fie cat mai eficient din punct de vedere energetic si in special al consumului de energie termica
- Cele trei stari ale unei camere pot fi, de exemplu:

Stare camera	Temperatura (grade C)	Alimentare lluminat	Alimentare prize (frigider, TV)
Nerezervat	11	Nu	Nu
Rezervat dar Neocupat	18	Nu	Da
Ocupat	22	Da	Da

- Trecerea din Nerezervat in Rezervat se comanda din softwareul de management hotelier “Medalion”. Sistemul de automatizare a fost interconectat cu cel hotelier
- Trecerea din Rezervat in Ocupat se face prin introducerea cartelei

# Solutia practica de automatizare

# Solutia practica de automatizare

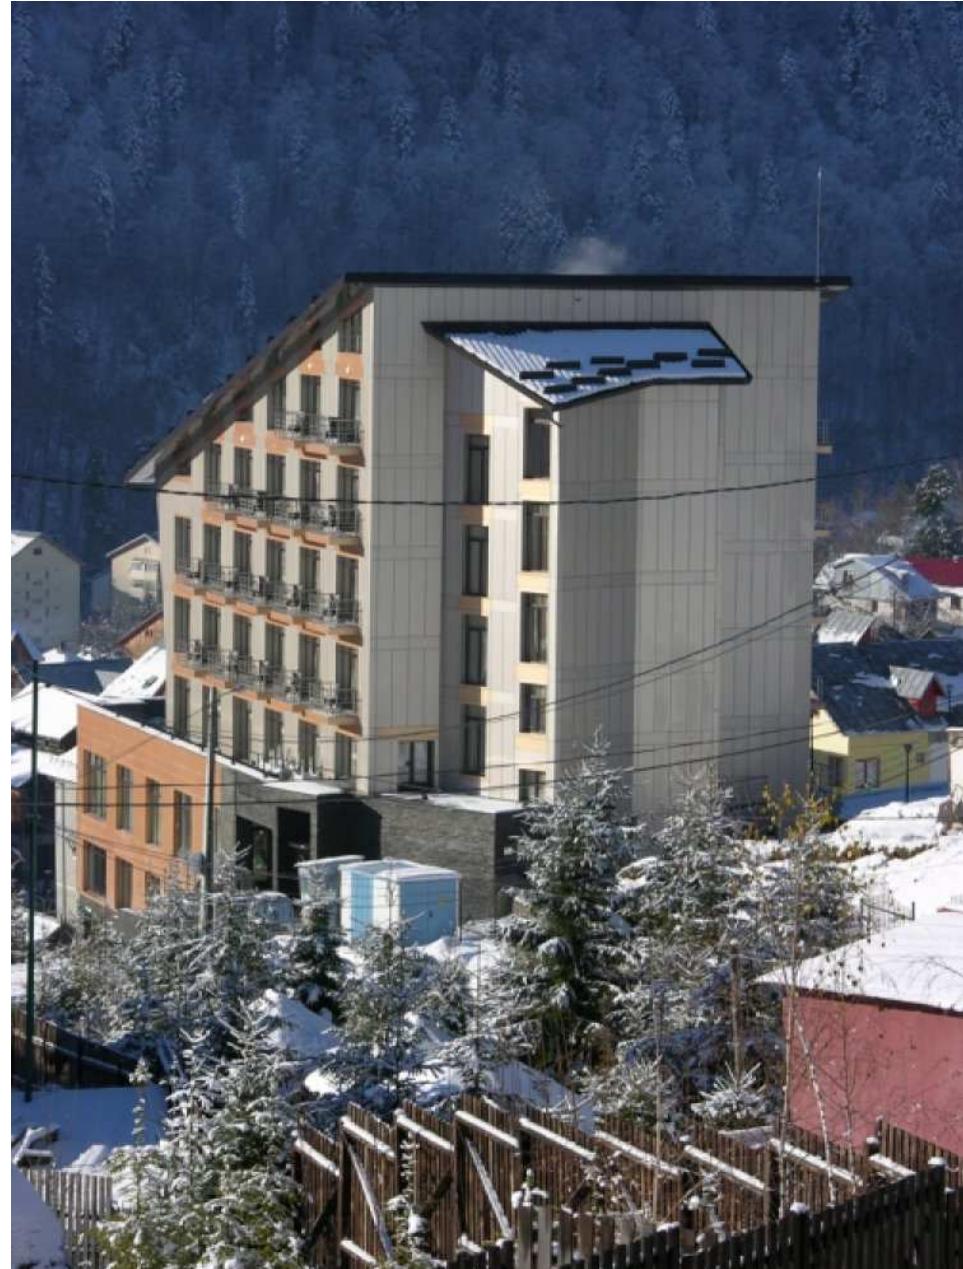

# Avantaje

- Costul mediu automatizarii a fost de cca 500Euro per camera (incluzand interconectarea cu softwareul de management hotelier)
- Recuperarea investitiei: cca 3 ani (la un grad de ocupare de 50%)
- Economii: 30-45% la en. termica,  
40-60 la en. electrica
- Solutia permite contorizarea consumurilor si vizualizarea defectiunilor facand astfel operarea mult mai simpla in conditiile utilizarii unui personal redus
- Datorita flexibilitatii solutiei, pot fi usor adaugate jaluzele automatizate, care vor contribui la cresterea eficientei energetice

# Intrebari si raspunsuri!

Va multumim!
