

“Romania Green Building Professional” - Certification & Training program

The Romania Green Building Council (RoGBC) has initiated a certification and training program to provide greater certainty of the abilities of professionals working in construction and related industries toward a sustainable built environment.

The program requires ten courses; eight of which are required and two can be chosen from a selection of courses by the professional. The program is designed specifically to ensure cross-training between different disciplines as more efficient collaboration is a critical factor in delivering successful green building projects. The courses will include both theory and practice from experts active domestically and internationally.

Following the development of other construction markets and local increase of green building activity, the certification is expected to increase the marketability to the professional’s services provided. The program is funded by the RoGBC itself and the course fees have been set to maximize access while ensure the quality of the instruction and the training facility. The RoGBC will provide financing options to help professionals who are negatively affected by the crisis participate in the program.

The program’s initiation is being expedited in order to for professionals to be able to complete the program by the end of this year.

About the RoGBC...

The Romania Green Building Councils is non-profit, non-political association encouraging the market, educational, and legislative conditions necessary to promote high performance construction that is both sustainable and profitable. The Romania GBC is an “Established Council” of the World Green Building Council. The organization is modeled after successful Green Building Councils that achieved significant results in facilitating the implementation of green construction in other countries such as the U.S., Canada, Germany, and the U.K.

The RoGBC team has extensive training experience organizing over fifty successful events in Romania on various sustainable construction topics using a variety of formats. Most relevant training courses include “Green Building Design and Enabling Technologies”, “Sustainable Construction Materials”, “Valuation and Cost of Green Buildings” and many others. During one year and a half RoGBC trained more than 1000 professionals active in Romania on comprehensive green building topics. Training and education is one of the core strategic activities developed by the RoGBC for accomplishing the broader mission of transforming the construction and related industries in Romania toward greater environmental responsibility.

Costs Estimates for

Training Program:

Status / Type	Cost per Course	Total
RoGBC member – Pre-Paid	96 EUR	960EUR
RoGBC member – Individual	125 EUR	1250EUR
Non-member – Pre-paid	155 EUR	1555EUR
Non-member – Individual	195 EUR	1950EUR

The Program's Courses:

Description	Hours	
Legal Requirements and Voluntary Certification for Green Buildings in Romania.	4	Required
Green Design Principles	6	Required
The Financial Valuation of Green Building	4	Required
Managing Green Building Projects	6	Required
Sustainable Site Selection and Management	6	Required
Lighting Design & Smart Buildings	6	Required
Sustainable Materials and Resources	6	Required
The Future of Facilities Management / Creating Greener Workspaces	6	Required
Building Envelopes of Green Buildings	6	Optional
Landscape & Exterior Design	6	Optional
The IT tools of Green Design	4	Optional
Transport Nodes, Roads, Vehicles and Electrical Recharging	4	Optional
HVAC & Hot Water Solutions	4	Optional
Energy Management & Integration with Renewable Energy Sources	4	Optional
Water Preservation and efficiency	4	Optional
